Remove items from a set in ES6

Let's practice removing items from an ES6 Set using the `delete` method.

First, create an ES6 Set:

```
var set = new Set([1,2,3]);
```

Now remove an item from your Set with the `delete` method.

```
set.delete(1);
console.log([...set]) // should return [ 2, 3 ]
```

Now, create a set with the integers 1, 2, 3, 4, & 5.

Remove the values 2 and 5, and then return the set.

	Your Set should contain the values `1, 3, & 4`
